PROJECT CREDITS

BklynConnect documents a project undertaken by the Brooklyn Public Library, and TYTHEdesign. This project is made possible in part by the Institute of Museum and Library Services (IMLS) National Leadership Planning Grant.

Facilitators and Researchers: TYTHEdesign with the support of Project Urbanista and Julia Marden

Report prepared and designed by: TYTHEdesign
Brooklyn Public Library (BPL) is committed to serving a diverse community in Brooklyn. Through BklynConnect, BPL aims to address the needs of the community in a time where technological innovations are drastically changing the role of libraries. To cater to the evolving needs of the community, BPL is exploring new models and technologies for engaging with patrons. One opportunity is to provide public Wi-Fi access outside the four walls of the library, utilizing mesh networks, point-to-point networks, or portable hotspots.

The overall purpose of BklynConnect is to uncover neighborhood broadband needs collectively, the opportunities for programming/services such as access to information, education digital literacy and inclusion, to collaborate with fellows and to provide a playbook to share strategies and document the research process.

This document is the result of many conversations, workshops with community partners, neighborhood surveys, data research, tabling experience and fieldwork. The report can be used as:

- a guide to understanding digital access and literacy in Brownsville
- a shared resource for existing initiatives and Wi-Fi access points in the neighborhood
- a comprehensive overview of relevant data and community insight
- a starting point for future public Wi-Fi initiatives or education services.

Life is becoming increasingly digital. Whereas we used to access the internet for email or browsing, it has now become an important component of everyday life. Fundamental services such as applying for government benefits, accessing education and applying to jobs are increasingly moving online making access to Wi-Fi a necessity. However, having Wi-Fi at home is expensive, and not everyone is comfortable with the technology. Many cities have made bridging this digital divide a top priority; the NYC Mayor’s Office, under the OneNYC plan, aims to give every resident affordable, reliable and good quality broadband by 2025.

BPL launched BklynConnect with a grant from the Institute of Museum and Library Services (IMLS). BPL will pilot a small scale public Wi-Fi access point in one Brooklyn neighborhood through a process of co-creation, while simultaneously using the opportunity to learn about the neighborhood needs and existing assets and initiatives. The following report details what we found out during our work and research with the neighborhood of Brownsville.
WHO HAS ACCESS ACROSS THE USA?

Checking your email, going on Facebook, searching for job listings, sending in applications, playing an online game, seeing the latest music videos, filing taxes, applying for housing, using e-government, finding directions, and just surfing the internet. Access to Wi-Fi, and the digital literacy needed to navigate the internet, has become a critical component to social inclusion.

According to Pew Research Center, broadband access, or access to high-speed Internet, in American households has plateaued at 67%\(^1\). While 76% of households in Brooklyn had home broadband access in 2014\(^2\), many families still struggle with low-quality service, service cutoffs, or old technology\(^3\).

Approximately 33% of Americans lack broadband access at home, and the majority of those people state cost as the most important reason. An increasing number of Americans are now smartphone-only, meaning they don't access the internet via a home computer Wi-Fi connection, but do have a data plan. This can be challenging due to data ceilings or limited usability of their devices\(^4\).

So where would you go to find Wi-Fi elsewhere? Some people go to local community centers; others go to the library or find a local café with Wi-Fi. According to Mayor de Blasio, every New Yorker should live within an eighth of a mile to a place that provides free Public Wi-Fi\(^5\).

Let's clarify some digital definitions so we are on the same page for the remainder of this document.

**Broadband Access:** This term refers to having high speed internet in the home, and specifically, the ability to transfer large files and ‘stream’ data. This is when you connect to the internet using a physical cable, be it a telephone line (DSL) or a cable line (cable), or a fiber optic line (FIOS). It is typical for Broadband in the home to include a Wi-Fi network. But broadband does not include Wi-Fi through a phone connection.

**Digital Divide:** This refers to the divide between people that do have access and people that don’t have access to broadband. It often is the already vulnerable populations that lack access to broadband such as lower income populations or homeless populations. Broadband access is particularly important for locating and applying for opportunities that support family well-being and mobility, including jobs, access to health care, and poverty alleviation programs\(^6\). Once the access to the computer has been established, the digital divide is focused more on digital computing such as coding skills.

**Digital Literacy:** Not everyone is comfortable with technology. Digital literacy refers to the ability to not only connect to the internet but to also have the skills, knowledge, and familiarity in using the technology (internet and computer). Populations that are vulnerable to digital illiteracy include elderly populations and low income households\(^7\). To take it one step further, Pew (2017) refers to Digital Readiness as being able to use Digital resources for learning purposes, such as adult education\(^8\).

HOW DID WE GO ABOUT THIS RESEARCH?

We used a wide range of research methodologies to investigate three Brooklyn neighborhoods: Bedford Stuyvesant, East New York, and Brownsville. We conducted neighborhood need assessments using traditional research methods such as demographic data research but also employed human-centered design methodologies such as community partner workshops, tabling activities, and collective mapping. Throughout the research, transparency, co-creation and broad usability have been key drivers.

Every research process starts with a question or a goal, so what was it exactly that we are trying to find out? First, we wanted to understand neighborhood context, data, and behavior in relationship to existing Wi-Fi and provide a relevant overview of the state of broadband access. Second, we wanted to provide BPL with some considerations to inform their selection of a pilot neighborhood.

BPL, TYTHEdesign and local library staff co-created the following criteria and research goals:

- Assessing Neighborhood demand for free Wi-Fi
  - Personal physical access to the internet
  - Existing Wi-Fi access points in neighborhood
  - Digital literacy in the neighborhood

- Researching existing neighborhood context and social capital
  - The demographics of the neighborhood
  - The potential for collaboration with existing social capital (including community based organizations, government agencies, etc)
  - Existing neighborhood internet access initiatives

In the spirit of co-creation, transparency and broad usability, our aim is to present our findings with neighborhood organizations, local service providers, local library branches and all other interested parties, ensuring that the neighborhood need assessment is valuable outside of the pilot project.

The need assessment was subject to a couple of limitations. First, working with a short time frame limits the breadth of the research. Also, although the collected social capital and Wi-Fi access points are what we identified during the research period, it doesn’t necessarily mean that it is comprehensive; we might have missed or excluded some. Finally, we have predominantly connected to community members that were already interacted with the Brooklyn Public Library, which leads to pre-existing positive bias or buy-in and fewer counter insights.
WHAT NUMBERS MATTER? NEIGHBORHOOD SNAPSHOT

Assessing Brownsville's strengths, challenges, needs, and assets through the numbers is an essential first step to better understand its existing neighborhood dynamics. The following two pages provide a snapshot of some of Brownsville's relevant demographics, existing assets and economic factors that impact the neighborhood need for free public Wi-Fi service.

Population

127,468

Households

46,351

20% are NYCHA households

Highlights

33.7 yrs old is the median age of the residents, which is slightly lower than the Brooklyn average of 34.7.

74 yrs old is the average life expectancy of people in the neighborhood.

24.5% of people speak other languages than English at home, with the largest percentage being Spanish speakers.

90% of the foreign-born population's place of birth is Latin America.

16.4% is the homeownership rate of Brownsville, which more than 10% lower than the Brooklyn average of 28.7%.

70% of the employed residents use public transportation to get to work.

$870 is the median rent, which is lower than the Brooklyn average of $1,300.

20.2 is the crime rate per 1000 residents in the neighborhood, which is higher than the Brooklyn average 11.6.

Population by age range

Household Composition

34% are households with children under 18 years

31% are foreign-born, lower than the Brooklyn average of 38%

46% are single mothers

Educational Attainment

Accessibility

According to the Fiscal Year 2017 Statement of Community District Needs, the three most pressing issues facing the Brooklyn Community District 16 are the following:

- Crime
- Affordable Housing
- Health Care Services

Median Income

- Brooklyn: $27,350
- NYCHA: $16,904

about two-fifths of the amount in Brooklyn: $51,690

Household Income Distribution

- ≤$20,000: 37%
- $20,001-$40,000: 24%
- $40,001-$60,000: 15%

- $100,001-$250,000: 8%
- $250,001+: >1%

Cost ratio internet vs household income in the neighborhood

This map shows the yearly cost of broadband access at home as a percentage of median household income by census tract.

For this purpose, we have estimated the monthly cost at ~$60 per month ($39.95 (basis)+ $10.00 (modem)+ $5.00 (installation)+ tax) for the first year. This is based on the available providers in this neighborhood. [Optimum 60Mbps]
WHO LACKS ACCESS TO THE INTERNET?

Let’s get down to the question that is at the center of this research: “Who has access to the Internet in the neighborhood?”. To understand the need and capacity for a free Wi-Fi service in the neighborhood, it is important to look at all factors including broadband access at home, data plans, and ownership of devices as this affects what you use the internet for. The American Community Survey (ACS) from 2014 and 2015 provides some insights about Brownsville.

In Brownsville the main providers are Optimum (cable) and Verizon (DSL), some parts (~33%) of the neighborhood have access to Verizon FIOS, a much faster connection23.

In addition to the information from the ACS it is important to take the residents that don’t have broadband at home into consideration. The following information was collected and analyzed through a survey distributed in Bed-Stuy, Brownsville, and East New York. A total of 620 surveys were collected. Since there were no large differences between the three neighborhoods, we have decided to compile data for the entire research area.

<table>

22 https://broadbandnow.com, visited on August 29th 2017  
23-24 American Community Census 2015  
25 American Community Census 2015 (1-year estimates)
“Do you have Wi-Fi at home? No? Why not?” The Pew Research Center (2015) states that cost is the major reason for households not to have internet at home (33%). Another 10% states that the cost of the computer itself is their main reason for not adopting broadband at home. Other reasons include being able to access the internet elsewhere (10%) and having sufficient access via smartphone (12%). There is also an inequality when it comes to quality of services, some areas are underrepresented by broadband providers, other areas are subject to older technologies. Finally, digital literacy can be a reason for not purchasing broadband access, the older generation are sometimes not tapped into the internet.

Increasing access to public Wi-Fi would be beneficial to many people, but some population groups might need it more than others. Let’s start off with cost as a reason in mind. Pew’s research (2015) shows that households that experience low income, unemployment, homelessness or lack of education are more likely to have barriers to Wi-Fi access. Furthermore, keeping digital literacy in mind, we also consider older adults (65+) a group of higher need. Finally, non-English speaking families are considered to have less access to broadband at home.

Based on the 2014 American Community Survey, 42.8% of the households in the neighborhood do not have broadband access at home. The data does not stipulate who these residents are, but based on the research, the high needs population in Brownsville are the following:

### What data plans are people paying for?

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

### LOW INCOME HOUSEHOLDS

- 37% households have an income < $20,000
- 15% lower than the Brooklyn Average: −22%

### NYCHA HOUSEHOLDS

- 53% with seniors
- 59% with children
- 5.2% of all of Brooklyn’s NYCHA developments are in Brownsville.
- 9074 residents
- 21,400 residents

### POPULATION 65+

- 10.7%
- ~13,600 seniors residents in Brownsville.
- 26% of those are living below the poverty line.

### POPULATION 25+ WITHOUT A HIGH SCHOOL DIPLOMA

- ~32,600 individuals
- 6.1% higher the Brooklyn average: 19.5%
- 25.6%

### UNEMPLOYMENT RATE

- 13.8%
- ~17,600 individuals
- Almost double the Brooklyn average: 7.6%

### HOMELESS FAMILIES

- 1 in 5 students have experienced homelessness in the last 5 years.
- 16 Family Shelters
- 14% of all in Brooklyn

---

WHERE CAN YOU ACCESS WI-FI IN BROWNSVILLE?

On this page you find a list of Wi-Fi access points in the neighborhood. There are different ways of accessing the internet outside of the house. We identify three distinct types of Wi-Fi access points:

**Public Wi-Fi:** this is any Wi-Fi that is accessible to everyone and has no cost associated with it e.g. parks, the library and subway station.

**Semi-Public Wi-Fi:** These are places that have free access, or sometimes even computer classes, but there can be prerequisites to using the internet such as being a resident or a member e.g. Workforce 1 Centers, NYCHA community centers, Senior centers.

**Establishment:** These places are open to the public but have a direct or indirect cost affiliated with Wi-Fi e.g. restaurants and coffee places.

We have identified 31 Wi-Fi access points in Brownsville. There are a couple things that stand out. First the lack of subway access, which is due to most of the stations being above ground. Also, there is an concentration of public Wi-Fi at Fulton Street, which is partly due to LinkNYC coming to the neighborhood. Other accumulations are around Rockaway Ave and 98th Street. In contrast, there are some residential pockets that have no identified Wi-Fi spot at all, in the northwest corner of the neighborhood.

### Public Wi-Fi

1. **Brookdale University Hospital**, 1 Brookdale Plaza Stone
2. **Avenue Library**, 581 Mother Gaston Blvd
3. **East Flatbush Library**, 9612 Church Ave
4. **Brownsville Brooklyn Library**, 61 Glenmore Ave
5. **Saratoga Library Branch**, 8 Thomas S Boyland St
6. **Rockaway Ave** (subway)
7. **Broadway Junction** (subway)
8. **LinkNYC** (Fulton St at Rockaway Ave)
9. **LinkNYC** (Fulton St at Rockaway Ave)
10. **LinkNYC** (Fulton St at Easter Pkwy)
11. **LinkNYC** (Fulton St at Easter Pkwy)

### Semi-Public Wi-Fi

12. **Brownsville Recreation Center**, 1555 Linden Blvd
13. **Urban Strategies Shelter**, 808 Saratoga Ave
14. **Rev. R. Brown Senior Center**, 1630 St Marks Ave
15. **Tilden Community Center**, 630 Mother Gaston Blvd
16. **Van Dyke Community Center**, 330 Powell St
17. **Woodson Senior Center**, 460 Dumont Ave
18. **Saratoga Community Center**, 940 Hancock St
19. **Gregory Jackson Center**, 519 Rockaway Ave

### Establishment

20. **MacDonalds**, 1642 Pitkin Ave
21. **Burger King**, 1663 Linden Blvd
22. **Burger King**, 9006 Church Ave
23. **Dunkin Donuts**, 1427 Linden Blvd
24. **Dunkin Donuts**, 241-A Rockaway Pkwy
25. **Three Black Cats**, 3 Belmont Ave
26. **Blendzville**, 5 Sutter Ave
27. **KFC**, 1667 Pitkin Ave
28. **Crown Fried Chicken**, 6 Sutter Ave
29. **Dunkin Donuts**, 1993 Atlantic Ave
30. **Dunkin Donuts**, 1610 Bushwick Ave
31. **Cricket**, 1621 Pitkin Ave
EXISTING INTERNET ACCESS INITIATIVES

The intention of this section is to provide an oversight of already-existing initiatives happening throughout Brownsville, aimed at closing the digital divide. Both the public and private sectors understand that internet service is essential to the city, to a neighborhood’s competitiveness, and to civic life.

**LinkNYC**
As part of the OneNYC initiative, the City committed to bringing every New Yorker affordable, high-speed internet access by 2025. In 2016 LinkNYC kiosks were installed on commercial streets. Each kiosk provides providing free high-speed Wi-Fi, free phone calls, free phone charging, and direct access to 911 and 311. This is an initiative of the New York City Department of Information Technology & Telecommunications (DoITT).

In Brownsville 4 kiosks installed, along Fulton Street between Rockaway Avenue and Eastern Parkway.

**NYCHA Initiatives**
NYCHA has deployed several initiatives to support their residents who don’t have the financial means to have internet access in their home.

**NYCHA Digital Kiosk (Self-service Portal):** 24/7 kiosks are located in each NYCHA development; residents can access NYCHA’s online services and access the internet.

NYCHA deployed three Digital Vans, a computer-lab on wheels that tours housing developments throughout the city to provide internet access to NYCHA residents. The vans rotate between developments in Brooklyn, to view the schedule visit the monthly calendar: http://www1.nyc.gov/site/nycha/residents/digital-van.page

**Free subway Wi-Fi**
MTA Transit Wireless, is an initiative of the Metropolitan Transportation Authority (MTA) and New York City Transit Authority (NYCTA) to provide free Wi-Fi to New York City subway riders. Currently, all underground stations have Wi-Fi but no timeline has yet been released for the above ground stations.

In Brownsville 1 station on the A-C line has Wi-Fi; Broadway-Junction.

**Free Wi-Fi on Buses**
As part of the Metropolitan Transportation Authority (MTA) initiative to improvement of bus services, 2,000 new buses with Wi-Fi and USB charging ports will be added to its fleet in the next five years. By the end of 2017, all express buses (including existing buses) will be retrofitted with Wi-Fi and USB charging ports.

By mid-October of this year, in Brownsville the B8 and B35 will include Wi-Fi and USB charging ports.

**Dept. of Parks and Recreation**
NYC Parks has collaborated with several different internet services, to provide Wi-Fi to park visitors. The internet services are either provided by AT&T (with no limits) or by Altice USA and Spectrum (both with limits, allowing 3 free 10 minute sessions every 30 days or purchase a 99 cent day pass through midnight).

In Brownsville, the Brownsville Playground near Hegeman Ave has limited free Wi-Fi.

**Department of Education**
Career and Technical Education (CTE) courses provide adults with an opportunity to acquire technical, trade, construction, or entrepreneurial skills, including basic Computer Literacy and Microsoft Certifications. CTE classes are offered to adults without a high school diploma.

P.S. 13 Roberto Clemente - 557 Pennsylvania Avenue, Brooklyn, NY 11207.
Course calendar: http://schools.nyc.gov/community/AdultEd/classes/ProgramInfo.htm
NYC Connected Communities
To support high need communities throughout the city, DoITT NYC Connected Communities expands the availability of public computer centers and classes, in partnerships with other agencies the following initiatives are available in Brownsville.

The NYCHA Community Computer Centers offer Internet access, computers and printing at select NYCHA locations across New York City that currently lack these resources.

In Brownsville there are five NYCHA Community Computer Centers, refer to page 10-11 for the full list.

To increase access to training opportunities, the Department of Aging is collaborating with Older Adult Technology Services (OATS) to provide free computer classes and use of computers to their members.

In Brownsville, there are a total of 2 senior centers providing computer classes.

NYC Parks Department provides basic computer classes for adults and seniors including instruction in topics like web browsing, Internet security, resume writing and web design. All classes are free to Parks Department Recreation Center members.

In Brownsville, there are classes held at the Brownsville Recreation Center, 1555 Linden Blvd, Brooklyn. Check out the schedule: https://www.nycgovparks.org/facilities/recreationcenters/B270/schedule

Brooklyn Public Library
The library has many different programs related to BklynConnect. The following is a sample of those that touch on digital literacy and access to broadband that are currently planned in Brownsville. For details and an updated list - https://goo.gl/JP7zog

Brownsville Branch Programming
All ages
- Computer Classes

Young Adults and Teens
- Teen Tech Time

Kids
- Kids Tech Time

Stone Avenue Branch Programming:
Adult
- Crochet Step by Step
- Introduction to Computers
- WWW for Adults
- Kanopy Movies

Seniors
- Introduction to Computers

Young Adults and Teens
- Library lab (STEM)
- Teen Tech Time

Kids
- Kids Tech Time
- Bloxels: Design Video Games

Saratoga Branch Programming:
Adult
- Computer Classes

Seniors
- Computer Classes

Young Adults and Teens
- Teen Coding Camp
- 3D Printing
- Teen Tech Time (gaming)
A little over two-fifths of Brownsville households currently don’t have broadband access in the home, leading them to look elsewhere for their access needs. For many, the local branch libraries are that resource. In the last year, it is estimated there were 857 sessions per computer/year across all of the three Brownsville branches. Even though not all individuals without internet use the branches, those who do provide a snapshot of the typical use of public Wi-Fi and the community’s digital access and literacy needs.

**Brownsville Library Wi-Fi and Computer use**

- **12,626** Wi-Fi Sessions at the Brownsville branches
- **104,395** PC sessions at the Brownsville branches
- **68%** of computer users in Brownsville branches are adults

### What are neighborhood patrons using the computers for?

To build a better understanding of neighborhood use of public Wi-Fi services, we asked library staff in a survey to share how they see patrons using the library computers. We combined that information with the insights of participating student BklynConnect fellows, who observed 59 adults in 3 branches in Brownsville using the computer for a few hours. Initially we had heard many assume that patrons mostly use computers for job search or filling out government forms, however according to their observation most patrons were using the computers for general browsing (34%), e-mail (37%), and social media (25%). Adults were also using the computers for games (14%) and job applications (11%). It is clear that for many patrons, the computer as a resource is not only for accessing services but also for enjoyment.

### Did the neighborhood patrons display any digital literacy challenges?

As part of both the library staff survey and fellow observations, patrons displayed a variety of comfort levels. Many were comfortable with the computer, technology and were even seen coding, while others expressed a low level of digital literacy, personal anxiety, impatience, and even unwillingness to learn something new.

Of the patrons observed, 41% were seen pecking (using one finger to type), 17% had general discomfort with the mouse, and 9% asked for help. At the Brownsville branches library staff provided help with printing, technical computer issues such as sticky keys, creating a resume, and more internet-related challenges such as uploading and downloading documents in e-mail. The absolute largest challenges expressed by the library staff were resetting passwords and general patron frustration with waiting for their turn to secure computer space and time.

Library staff expressed the following:

- Patrons tend to be intimidated by technology and tend to want staff to complete tasks for them as opposed to teaching them how to do it themselves.
- Patrons ask “I have to show you my shelter address every time I get a laptop.”
- Impatience with making mistakes.
- Slow server, Patrons don’t understand how to download documents, frustration of patrons on how to use system as a whole.

---

26 Brooklyn Public Library
How comfortable were neighborhood patrons using Wi-Fi in a public place?

A key aspect of providing free Wi-Fi services is to do it in a way that ensures that individuals are comfortable using it. As the library is a very public place, we were interested to see what privacy concerns or behaviors might be present. BPL fellows found that 43% of the observed patrons (155) showed privacy-seeking behavior such as wearing headphones, covering the screen with their hands or a cover, constantly checking over their shoulder, or turning the screen away.

CASE STUDY: MIFI HOTSPOT

In the school year 2016-2017 Brooklyn Public Library lent out 1500 portable Wi-Fi hotspots to patrons, informally called a MIFI device. The goal of this project was to provide students with an entire school year of free internet access. For a household to be eligible for the programs they had to lack internet access, have a child that attends NYC public school, be over 18 years old and hold a valid library card.

Both the Brownsville branch and the Saratoga branch were part of the pilot. The data collected by the participating neighborhood patrons provides insights into the internet access needs of low income families with school age children.

Before the hotspot, where do the kids access the internet?

The following data is from the Brownsville households who filled out the exit survey:

- 51% did not have Wi-Fi access at home over the last three years
- 83% of participants finished high school or higher education
- 62% of the participants were women
- 47% of the participants were from low income households

The MIFI program ran in collaboration with the New York Public Library and the Queens Public Library and was the largest program in the US. The following data is derived from the exit survey filled out by participants across all three boroughs. The relevance in this data lays in the similarity of the target audience of BklynConnect.

- 60% of all participants indicated that they don't have Wi-Fi at home due its to high cost
- 58% of all participants indicated that have a cellphone with a data plan
- 42% of participants finished high school or higher education

WHAT WE HEARD IN BROWNSVILLE

To ensure we are gathering neighborhood input as part of this need assessment, we held a workshop conversation on the 10th of July with a group of community-based organizations, service providers, local computer trainers, local branch librarians, and key neighborhood stakeholders. We started the afternoon by discussing how additional public Wi-Fi could be of benefit to the neighborhood and their organizations, used a series of scenarios accompanied by a map to gain understanding of consideration regarding additional Public Wi-Fi. Hundreds of insights were collected.

We were specifically interested in how free public internet access could impact their services, organization and how it might affect neighborhood residents. Many felt that ‘almost everything is online today’ from housing to school information to job listings. The fact that nearly all city services require online forms means that for someone without access to the internet there is a barrier to those benefits, leaving those residents stuck on the wrong side of the door to opportunity.

Overall, it was clear that all community stakeholders felt that access to free internet would not only play a major role in supporting residents’ everyday life but also support a more equitable access to services and resources, and to support building personal relationships.

The key benefits of providing free Wi-Fi services expressed by Brownsville community stakeholders include:

- Providing residents access to online services, forms and resources
- Supporting students of all ages with school homework
- Increase the ability for local service provider to do outreach and provide direct support
- Directly support residents transitioning out of shelters

Community stakeholders also expressed that the opportunity to link residents to information was one of the largest benefits to providing free Wi-Fi in the neighborhood. When asked what type of information could be most beneficial, the following were suggested as most needed based on their first-hand experiences with Brownsville residents:

- Calendar of local events and free classes
- Directory of local services and neighbored resources
- Direct access to NYC government forms (Housing, Tax, Immigration…)
- Educational opportunities for both adults and children
- Local and NYC-based job board

Free internet would have a great impact to my students. It would be easier for them to learn by the way of tablets and the use of their own devices to use the Internet. Additionally, it would reduce the expenses of the person – people are paying up to 200 a month and not everyone can afford that.

- Local Adult Computer and Digital Literacy Teacher

Free public internet would help the shelter children with their online homework assignments and research projects. Additionally, support their parents with employment search and apartment searches.

- Director of a Local Family Shelter

It would improve community productivity, as it would enable resident to use their smart devices to access online employment opportunities.

- Staff from Local Workforce Development Center

It will give parents the opportunities to read together (with their children) – by being able to access online books.

- Non-profit Day-care provider

It may help with tabling and other forms of outreach, by supporting both NYC agencies and other local organizations.

- Civil servant working at NYC Dept of Health

More Wi-Fi will be better for the community, as the library closes either at 6pm or 8pm, so the time constraints limit searching for the many patrons that visit.

- Local branch librarian
Where would additional public Wi-Fi be most beneficial? There are many different opportunities to consider. As part of the needs assessment process, BPL presented a series of scenarios to workshops attendees from the neighborhood to gather insight about not only potential locations for the pilot technology but also its feasibility, benefits and concerns.

The effort to provide free internet connectivity to those who frequent or live in the neighborhood holds different approaches that might address different audiences, evoke different issues or trigger different types of Wi-Fi use. The following provides an overview of the findings.

### Commercial corridors

**Free Wi-Fi along a neighborhood’s both heavily trafficked and less trafficked corridors.**

**Target Audience:** Broad. This could benefit shoppers, commuters, businesses, Business Improvement Districts (BID) and residents living along or in proximity of the corridor.

**Examples of use:** Searching shopping coupons, getting directions, checking bank accounts before purchases and surfing the web. The service would be most beneficial in terms of reducing the burden of an individual data plan.

**Benefits:** Attract more individuals to the corridor which will have a positive impact on local business owners.

**Concerns:** Might increase loitering; might be difficult to promote due to competition of already existing Wi-Fi networks.

### Public Plazas or outside Community Centers

**Free Wi-Fi surrounding a public plaza (potentially along a commercial corridor) or an existing community center.**

**Target Audience:** Broad. Residents living close, co-located service providers and shoppers that are taking a break.

**Examples of use:** This might be beneficial to individuals for receiving services, accessing online resources and surfing the web.

**Benefits:** This could have a positive economic impact for co-located services providers or surrounding businesses, foot traffic higher than other areas and individuals typically spend more time in a plaza.

**Concerns:** Public Wi-Fi might increase the plaza’s popularity and therefore its safety concerns and could require an increase in security or staffing; Individuals who are not affiliated with a community center might be less inclined to use the plaza and the service.

### Public Parks

**Free Wi-Fi located inside or along a public park or community garden.**

**Target Audience:** Broad. All daytime park visitors. Families, kids, teens and residents living along the park edge.

**Examples of use:** This service may support students working on their homework, parent’s multi-tasking online while being in the park with family and reducing the burden of an individual data plan.

**Benefits:** This could leverage existing resources such as community programming, enabling organizations to host meetings in the park; It could promote being outdoors and potentially lessen the congregation of kids and teens on street corners.

**Concerns:** Weather conditions and opening times might limit the audience; Kids might trade playtime for screen time; Safety.
Residential Areas
Free Wi-Fi located along a residential block or outside of a NYCHA housing development.

Target Audience: Smaller, as it would most directly benefit residents living on that block.

Examples of use: This service may support students working on their homework, reducing the burden of an individual data plan and providing access to those who do not have data plans.

Benefits: The service could reach a high-need audience that could potentially free services more heavily based on economic circumstances (quality vs quantity).

Concerns: Exclusion of an audience as residents who do not live on the block might not easily get to use the service; there might be an increase in loitering due to lack of seating. Higher density use might limit Wi-Fi speed.

Family Shelters
Free Wi-Fi located outside of a family shelter or near transitional housing.

Target Audience: Smaller. Residents living in these shelters as well as service providers supporting these families.

Examples of use: This service may support students working on their homework, reducing the burden on data plan, providing access to those who do not have data plans and be a resource for organizations providing services to marginalized populations.

Benefits: The service targets a high need population that could use it after shelter computer labs close; local service providers could use the Wi-Fi for tabling or programming.

Concerns: Might cause some loitering because of lack of outdoor seating. Some shelters have a curfew which would limit the use of the service.

Food Pantries and Soup Kitchens
Free Wi-Fi located outside of a food pantry or soup kitchen.

Target Audience: Smaller. Benefits residents receiving support at these locations, residents that live close and could serve as a resource for organizations providing services to residents.

Examples of use: Support reducing the burden on data plan, providing access to those who do not have data plans.

Benefits: Potentially easier to promote, since foot traffic and queues for services are higher than other areas; less concern with loitering because people are already there; potential for local services to use for programming.

Concerns: No outside seating; limited opening times might limit the time frame for the service.

There is no Wi-Fi in our shelter rooms. If residents wanted to get it themselves they would have to purchase hotspots or access our computer room before 6p. If free public Wi-Fi was accessible, it would be beneficial for our residents to research for jobs and housing applications and be provided with all the resources to be able to move out of their predicament.

- Local Family Shelter provider

Free public internet would help the shelter children with their online homework assignments and research projects. Additionally support their parents with employment search and apartment searches.

-Director of a Local Family Shelter
Key considerations we heard about Wi-Fi coming to the neighborhood.

Although community stakeholders expressed many potential benefits to bringing Wi-Fi to the neighborhood there were several concerns and questions were expressed as well. The following are the syntheses highlights:

Target Audience: When considering a location, be conscious about who these services are trying to reach and benefit. Not all locations are equally attended, accessible or open to the public, and not all audiences, including many elderly residents, are as mobile.

Impacts on the Surroundings: How does adding Wi-Fi impact its surrounding? Could it negatively impact business or attract larger crowds?

Time Constraints: Many places have limitations in terms of time such as a curfew or closing time. Is there value to turning the Wi-Fi on and off?

Technology: When considering the type of Wi-Fi, are there benefits of a service that doesn't penetrate walls? How large of a footprint is impactful? What is the benefit of the addition of free Wi-Fi when someone doesn't own the devices?

Safety and Security: The additional high priced devices out in public and the addition of individuals outside loitering and later in the evening sparked concerns about safety, security and the need for increased police patrol.

Physical Environment: If the aim is to support individuals working on laptops, such as students, be conscious if the location chosen has the appropriate seating or tables and/or is appropriately covered to support any weather conditions.

Digital Literacy and Educational Support: Not all residents might know how to use the service. How can we educate the community on how to use it? Is this an opportunity to educate and support individuals with co-located knowledge training in a surrounding space?

Usability: People choose to connect to Wi-Fi based on several factors. It is important to consider if the connection is secure, what the speed of the connection is and if there is a time limit to using it, this will widely affect its usability.

Land Use in Brownsville
This map represents land use in Brownsville. The map aims to provide context to the different scenarios (parks, residential, commercial corridor etc.) and therefore only shows parks, residential areas, commercial spaces and NYCHA buildings.

TYTHEdesign is a capacity-building firm that uses the lens of design and strategy to support organizations doing good in their communities. By taking a human-centered approach, we help organizations connect with their stakeholders, drive innovation internally, enhance new and existing services, and share their story. Ultimately, our mission is to deepen existing skills and strengthen the impact of the social sector.
